EDUCATION

- Netaji Subhas University of Technology** Delhi, India
Master of Technology in Computer Science and Engineering CGPA – 7.22 (till 2nd Sem.) *August 2025 – August 2027*
- Chitkara University** Himachal Pradesh, India
Bachelor of Engineering in Computer Science Engineering CGPA – 8.00 *August 2020 – August 2024*
- Nav Bharat Vidya Mandir School** Hisar, India
Senior Secondary; CGPA – 6.53 *July. 2019 – July. 2020*

PROJECTS

- IoT Intrusion Detection System**
1D-CNN-LSTM model
 - 1D-CNN-LSTM with DevOps Integration:** Developed a hybrid 1D-CNN-LSTM model with transfer learning on the CIC-IoT dataset to detect and classify multiple attack types. Automated the ML pipeline .
 - Hybrid Deep Learning for IoT Security:** Designed a 1D-CNN + LSTM architecture to capture sequential attack patterns, optimized for IoT environments. Deployed using Docker and Kubernetes for scalable, low-latency performance.
 - High Accuracy:** Achieved 98.7 accuracy for DDoS and malware detection. Implemented model versioning (DVC/MLflow) and real-time monitoring using Prometheus and Grafana.
- Smart Navigation App**
React Native based Navigation System
 - Real-time Emotion Analysis:** Made a cross-platform mobile navigation application using React Native and Expo, integrating Google Maps SDK to display live GPS location, interactive maps, and real-time location tracking.
 - Route Planning and Place Search:** Introduced destination search using Google Places API and generated optimized routes with Google Directions API, displaying estimated travel distance, travel time (ETA), and supporting both driving and walking navigation modes.
 - Location Services and User Experience:** Built reusable React Native components with React Navigation, implemented location permission handling, stored recent searches and favorite locations using AsyncStorage, and integrated REST APIs with Axios to deliver a responsive and scalable mobile experience.
- Food Delivery Web Application**
React Based Website
 - Restaurant Discovery Interface:** Prepared the main user interface for browsing and searching restaurants, implementing location-based filtering and real-time search that served 10,000+ users with 80 percent faster search results
 - Order Management System:** Developed the complete frontend ordering flow with cart management and checkout process handling 5,000+ simulated orders at 95 percent success rate using React state management.
 - User Experience Features:** Assessed user authentication, rating displays, price filtering, and responsive design for 15,000+ users on devices with 40 percent performance improvement.

TECHNICAL SKILLS

- Programming Languages:** C++, Python, JavaScript, SQL
- Core CS Fundamentals:** Operating Systems, Computer Networks, DBMS, OOP, DSA
- Web and Mobile Technologies:** React, React Native, HTML5, CSS3, JavaScript (ES6+), REST APIs
- Tools And Platforms:** Git, GitHub, Docker, VS Code, Postman, AWS, Expo

ACHIEVEMENTS AND AWARDS

- Participant, Yamaha Hackathon 2023:** Engineered a real-time emotion detection system utilizing CNNs during the Yamaha Hackathon, achieving the highest F1 score among junior team members and top 10 percent of all teams.
- Participant, Great India Hackathon 2022:** Applied and enhanced skills in React.js and frontend development that were directly implemented in my Zomato clone project Strengthened team collaboration and agile development practices through intensive coding sessions in a competitive environment.
- LeetCode:** LeetCode: 150+ problems covering core data structures. Maintains a daily question solving streak with 130+ problems completed.
